

AVINASH SHARMA

React Native Developer

Email: i.neekhil@gmail.com | LinkedIn: [inkedin.com/in/ineekhil](https://www.linkedin.com/in/ineekhil) | Portfolio: neekhil.com | GitHub: github.com/ineekhil

Summary

Software Engineer with 3+ years of experience building high-performance, scalable cross-platform mobile applications using React Native. Proven expertise in optimizing app performance, reducing load times, and delivering production-grade applications used by thousands of users. Strong full-stack capabilities with Node.js and RESTful API development, along with a solid foundation in system design, modular architecture, and performance optimization.

Skills

Languages: JavaScript, TypeScript, Kotlin

Mobile: React Native, Redux, React Navigation, Expo, Android Development, iOS Development, performance profiling, offline-first architecture

Backend: Node.js, Express.js, REST API Design, Authentication (JWT), Scalable APIs

Architecture: System Design, Modular Architecture, Scalable Architecture

Database: MongoDB, PostgreSQL, Firebase

Testing & Tools: Jest, Appium, Selenium, mobile test automation, CI/CD integration, Git, Bitbucket, Android Studio, Xcode, Postman, Jira, React Native DevTools

Experience

React Native Developer

June 2024 - Present

Viral Fission (Hybrid)

- Developed and maintained the **Vi-Fi mobile application (Play Store — App Store)**, a production-grade app with 10,000+ active users across Android and iOS.
- Engineered reusable mobile components with Redux state management, reducing app load times by 30% and minimizing unnecessary re-renders through advanced React patterns.
- Optimized mobile app performance using React Native DevTools, Android Studio, Xcode profilers, and native debugging tools—reducing crash rates by 25% and improving app stability.
- Integrated REST APIs with efficient data caching, pagination, and offline-first strategies, reducing API calls by 40% and improving performance on low-bandwidth networks.
- Implemented native Android (Kotlin/Java) and iOS modules for hardware-level integrations (geolocation, camera, sensors), showcasing deep platform knowledge.
- Owned full App Store and Play Store release lifecycle, feature delivery, bug fixes, versioning, and store optimization across both platforms.

QA Engineer

Feb 2023 - June 2024

Viral Fission (Hybrid)

- Designed and executed comprehensive test plans for both web and mobile applications across iOS and Android platforms, covering functional, regression, and performance testing.
- Built and maintained test automation frameworks using Appium and Selenium, cutting regression testing time by 50% and enabling continuous feedback on build quality.
- Performed API testing using Postman, validating REST API responses, error handling, and backend-mobile integration.
- Debugged native Android (Kotlin) and iOS platform-level issues, identifying root causes and collaborating with developers on performance fixes.

Android Developer Intern

Sep 2022 - Jan 2023

Viral Fission (On-site)

- Developed native Android applications using Kotlin, following best practices and platform guidelines from Android documentation.
- Debugged and optimized applications using Logcat and Android Debug Bridge (ADB), improving app stability and reducing memory usage by 20%.

Education

B.Sc. Computer Science

2022

Mumbai University

CGPA: 8.85 / 10
